Education

BSc. in Information Technology

North West University - Potchefstroom, NW

(2018 - 2021)

High School

Empangeni High School - Empangeni, KZN

2013-2017

Work experience

Monocle Solutions

Johannesburg

(January 2025 - Current)

Software Developer

At Monocle Solutions, I had to opportunity to work with a banking client as well as an internal data engineering project (a first for me).

For client work I did traditional Software Development, but within a Microsoft tenant utilising tools like Graph, SPFX, and Azure AI Search. The tech used wasn't the interesting part, as I learned more from working inside an environment as big as a bank. Skills like communication, documentation, transparency, expectations,

access requirements and patience were more valuable than technical know how.

Data Engineering as a discipline was new to me, but I was entrusted to research and come up with a POC for an internal data pipeline and analytical tool. I really enjoyed threading on unchartered territory (the data space) and learning some very neat and useful technologies.

Main technologies used during my time is :

- React
- .NET
- Python
- Azure
- SPFX
- MS Graph
- Apache Airflow
- RAG Implementations
- Superset - Power BI
- DuckDb

Synthesis Software Technologies

Johannesburg

(January 2022 - December 2024)

Software Developer

I have been responsible for creating new features for both the backend and frontend using a range of technologies and frameworks including new cutting edge technologies like event streaming & real time microservice streaming. All while embracing the agile methodology.

During my time I have provided software solutions for both international and domestic clients involved in logistics and agriculture (both are top players in their respective industries and markets).

Here I have gained the title “Alignment King” for my superior knowledge of the best programming language known to man: CSS

Main technologies used during my time is :

- **.NET**
- **Angular 13**
- **Vue 3**
- **MySQL**
- **SQL Server**
- **KSQL**
- **Confluent - Kafka (Event Streaming)**
- **Tailwind CSS**
- **Grafana**
- **Azure**
- **Awake AI**

Self-Employed Software Engineer

Potchefstroom

(Feb 2021 - Dec 2021)

LuCert

https://github.com/Tokoshima/LuCert

A Python program using PyQT5 and docx, I developed for the South African Wetland Society to digitally sign their certificates. Currently working on a web implementation deployed via Heroku and Flask.

hdpeElements

https://github.com/Tokoshima/HDPE

A Java application developed for Inqubeko Consulting Engineers that calculates HDPE Pipeline measurements that is used in determining strength, buoyancy and cost. The process of determining what type of HDPE pipes are fit for the job at hand was too cumbersome and time-intensive and needed a software solution.

Associate Film Producer

Tydfontein productions **- Pretoria, GP**

(Oct 2019 - Feb 2020)

- Researched various themes, topics and venues for proposed documentary.
- Successfully kept production spending on budget
- Manage actors and interviewee's schedules and pay.

Skills

Operating Systems

Linux

Windows

Cloud Platforms

AWS

Azure

Heroku

Methodologies

Agile

Waterfall

RAD

Scrum

Programming Languages

Java

Kotlin

C#

SQL

Python

JavaScript

Bash

Web Frameworks

Vue

.NET

Angular

Flask

Bootstrap

TailwindCSS

Spring

React

Software Tools

Git

Docker

Grafana

Maven

Gradle

Postman

Swagger

Xunit

Jira

Trello

Excel

Latex

Markdown

Ableton

Projects and Interests

Programming

LiveVac

- Android Application https://github.com/GerniVisser/LiveVac
- React Native https://github.com/AM-ops/live-vac

We started a development team at our university to enroll into the MTN Business App Campus Cup Hackathon 2021. LiveVac is a livestock vaccination scheduling application that automates the messy job of livestock vaccination management and scheduling. Written in Kotlin for android and then later developed a react native solution using Django as our back-end API. Successfully embraced the agile methodology in our team, and utilized Jira as our project management tool.

Our solution achieved Top 3 in Agricultural Solutions in the MTN Business App of the Year Awards 2021.

CodeWars

I like to participate in programming challenges like CodeWars, and enjoy solving problems and challenging myself with newer difficult concepts and data structures.

Personal Website

https://tokoshima.github.io/

My introduction to the world of web development. Using it to test new technology and is thus still under development.

Films

I also like to dedicate my time to the art of film and try to involve myself in the scene. I do film photography as a hobby.
